

Yaqub Naqib

Frontend Developer — React / TypeScript

Erbil, Kurdistan Region · +964 750 829 9544 · yaqub.nq@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

Available for Freelance & Subcontract Projects

PROFILE

Frontend engineer with 3+ years owning production commerce and SaaS frontends in React and TypeScript. I take features from API contract to live traffic: server-rendered React Router apps, design systems shared across multiple brands, trilingual RTL interfaces, and payment and checkout flows integrated with Laravel and Meta platform APIs. Measurable work on performance and accessibility on products serving tens of thousands of monthly users, delivered in distributed, English-speaking teams.

EXPERIENCE

Frontend Developer — iZone

Apr 2024 – Present

Iraq's largest Apple retailer · Multi-brand commerce · Erbil, Iraq · Full-time, on-site

- Own the TypeScript frontend for iZone's multi-brand commerce platform (iZone, Apple Zone, OneStore, Mantika Altufaha), serving **30,000+ monthly users** from one React Router SSR codebase and a shared Tailwind CSS design system
- Ship English, Arabic and Kurdish with full RTL and currency-aware catalogue pricing against a Laravel API, so one codebase powers every regional storefront without duplicated UI
- Reduced Largest Contentful Paint on catalogue and product routes from 3.8s to 1.4s with route-level code splitting, below-the-fold lazy loading and product-image preloading
- Built checkout and payments end-to-end: Mapbox address capture, in-app wallet (top-up and P2P transfer) and First Iraqi Bank QR payments with status polling, session recovery and full error-state coverage
- Delivered Digital Cards (iTunes, Google Play, PlayStation and gaming), IMEI device lookup, live FX rates, community Q&A and in-app customer chat on the same platform, gated by server-driven feature flags

Tech stack: TypeScript, React, React Router, Tailwind CSS, Jotai, Zod, Laravel API, Mapbox, i18next

Frontend Developer — Botolon

Nov 2023 – Apr 2025

No-code Meta automation SaaS · Erbil, Iraq · Contract, remote

- Owned the TypeScript / Next.js client for a Meta-connected comment and DM automation platform used by **50+ business pages** across Iraq and the Kurdistan Region (including operators such as Korek Phone), covering Facebook, Instagram and WhatsApp from one product
- Shipped per-post comment automation against the Meta Graph API — keyword rules, public replies and private Messenger DMs (text, image, audio, video, file), follow-gates, delayed follow-ups, reusable templates, scheduled posts and Reels — so merchants could reply 24/7 without duplicating setup per page
- Built the visual Messenger flow builder (drag-and-drop blocks, galleries, persistent menus, live-chat handoff) plus Instagram quick replies, icebreakers and an insights dashboard for likes, comments and DMs
- Delivered the commercial layer: subscription plans, invoicing and regional checkout (FIB, FastPay, card) with payment-status verification, multi-admin invites, a partner/reseller console and an internal ops dashboard for pages, plans and support tickets
- Localised the product into eight languages including Kurdish, Arabic and Farsi with full RTL, and shipped it as a PWA so merchants could run the dashboard from the browser or the home screen

Tech stack: TypeScript, React, Next.js, Redux Toolkit, Sass, Meta Graph API, i18next (8 locales / RTL), Chart.js, next-pwa, FIB / FastPay

SELECTED PROJECTS

WAOorders – WhatsApp Ordering Platform for Restaurants waordersiraq.com

Live multi-tenant SaaS with its first paying restaurant customers

- Designed, built and launched a product that turns free-text WhatsApp messages into structured restaurant orders – conversational bot, merchant dashboard, menu management and live order-status updates
- Trilingual conversational UX (English, Arabic, Kurdish) with automatic language detection, RTL support and AI-assisted replies via LLM integration
- Engineered end-to-end with Node.js/Express, PostgreSQL/Prisma, Remix and the Meta WhatsApp Cloud API; operated in production on a flat-subscription model

ErbilianWay – Travel Booking Platform erbiliantravel.com

- Built the responsive frontend and booking-enquiry flow for an Erbil tour operator against a Laravel API (Vue.js, Bootstrap)

SKILLS

Core:	TypeScript, JavaScript (ES6+), React, React Router (Remix), Next.js, Vue.js, Node.js, HTML5, CSS3
State & Data:	Jotai, Redux Toolkit, React Context, Zod, REST APIs, Firebase
Styling & Design Systems:	Tailwind CSS, Radix UI, Sass/SCSS, Bootstrap, responsive design, accessibility, i18n / RTL (i18next)
Platform & Integrations:	Meta Graph API, WhatsApp Cloud API, Mapbox, FIB / FastPay payments, PWA
Working knowledge:	Django, Django REST Framework, PostgreSQL/Prisma, MySQL, Python
Tooling:	Git, GitHub, Vite, Webpack, Vercel, Lighthouse, Sentry, Agile/Scrum

EDUCATION

BSc Software Engineering – Koya University Nov 2020 – May 2024

LANGUAGES

Kurdish – Native · **English** – Fluent (daily working language)
